Subject Index of Volumes 125–126

Acid resistant steels
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
Activation energy
Influence of Nb, V and Ti on peak strain of deformed austenite in Mo-based micro-alloyed steels, 72
Aerofoil dimensions
Die shape compensation in hot forging of titanium aerofoil sections, 347
AFM
An experimental investigation of steel surface characteristic transfer by cold rolling, 657
Al–Mg alloy
The effect of temperature on strain-rate sensitivity in high strength Al–Mg alloy sheet, 193
Stress corrosion cracking susceptibility of Al–Mg alloy sheet with high Mg content, 275
Aluminium alloy
Simulation of substructural strengthening in hot flat rolling, 179
A study of the manufacturing of tie-rod ends with casting/forging process, 471
Application of resistance heating technique to mushy state forming of aluminium alloy, 477
Aluminium bronze
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483
Aluminium extrusion
Modelling of plastic anisotropy in heat-treated aluminium extrusions, 84
Aluminium foam
New materials and production technologies for innovative lightweight constructions, 532
Analytical methods
Comparison of analytical methods and AI tools for material characterisation in hot forming, 434
Anisotropic properties
Experimental studies on bursting pressure of thin-walled flow formed pressure vessels, 228
Anisotropy
Modelling of plastic anisotropy in heat-treated aluminium extrusions, 84
The performance of Yld96 and BBC2000 yield functions in forming limit prediction, 281
An algorithm for determining the optimal blank shape for the deep drawing of aluminum cups, 743
Applications
Applications and capabilities of explosive forming, 1
Arbitrary Lagrangian–Eulerian
The practicalities of ring rolling simulation for profiled rings, 619
Artificial intelligence
Comparison of analytical methods and AI tools for material characterisation in hot forming, 434
Artificial neural networks
On-line tool condition monitoring and control system in forging processes, 464
Asymmetric rolling
Mathematical modelling of the stress–strain state in asymmetric flattening of metal band, 689
Austenite
Influence of Nb, V and Ti on peak strain of deformed austenite in Mo-based micro-alloyed steels, 72
Austenite grain size (AGS)
Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
Austenitic steel
The influence of the deformation mode on the final mechanical properties of products in multi-pass drawing and flat rolling, 725
Automatic visual inspection
Automatic inspection of metallic surface defects using genetic algorithms, 427
Axial crushing
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Axial force
A design of a third-order CVC roll profile, 645
Axi-symmetric drawing
The evaluation of redundant deformation factors in axi-symmetric bar drawing of austenitic stainless steel, 323

Backward tracing scheme
Implementation of backward tracing scheme of the FEM for design of initial tubular blank in hydroforming, 839
Band flattening
Mathematical modelling of the stress–strain state in asymmetric flattening of metal band, 689
Benchmark
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798
Bending
Stabilisation of mechanical properties of the wire by roller straightening, 711
Biaxial stretching
Microstructural inhomogeneity and biaxial stretching limits in aluminium alloy AA6016, 258
Bimetallic rods
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731
Blanking
A computational approach to blanking processes, 206
Analysis of simultaneous sheet metal forming operations using elastomer technique, 751

Elsevier Science B.V.
PII: S0924-0136(02)00524-1

Bondability
Lining of light metals with hard powders using shot peening, 525
Bonding point
Analytical approach to the cold-and-hot bond rolling of sandwich sheet with outer hard and inner soft layers, 664
Boundary elements
The effect of vibration on surface finish for semisolid and cast components, 543
Brass
Observations on fracture in axi-symmetric and three-dimensional cold upsetting of brass, 267
Buckling behaviour
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Bulge test
Simulation of the fastener manufacturing process, 361
Bulk forming
A National Centre for Metalforming Simulation in the UK, 555
Bulk metal forming
Correction of hydrostatic pressure obtained by the finite element flow formulation using moving least squares method, 588
Bursting
Influence of material and process parameters on the development of necking and bursting in flange and tube hydroforming, 849
Bursting pressure
Experimental studies on bursting pressure of thin-walled flow formed pressure vessels, 228

CAD/CAM/CAE
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26
Casting
Preparation and microstructure of in situ particle reinforced titanium matrix alloy, 103
The effect of vibration on surface finish for semisolid and cast components, 543
Casting/forging
A study of the manufacturing of tie-rod ends with casting/forging process, 471
Channel section
Determination of buckling limit of strain in cold roll forming by the finite element analysis, 626
Cladding tubes
The self-excited waves of deformation localisation and limiting state criterion for Zr–Nb alloys, 287
Closed-die forging
Analytical, numerical and experimental analyses of the closed-die forging, 334
Cold forging
Extension of the forming limits in cold and warm forging by the FE based fracture analysis with the integrated damage model of effective stresses, 235
Observations on fracture in axi-symmetric and three-dimensional cold upsetting of brass, 267
Verification of the damage model of effective stresses in cold and warm forging operations by experimental testing and FE simulations, 295
Cold forming of bolts
Cold forming of bolts without thermal treatment, 341
Cold pilgering
3D elastic–plastic finite element simulation of cold pilgering of zircaloy tubes, 814
Cold ring rolling
Elastic–plastic finite element analysis of cold ring rolling process, 613
Cold roll forming
Determination of buckling limit of strain in cold roll forming by the finite element analysis, 626
Numerical analysis of cold roll forming of symmetrical open sections, 633
Cold rolling
Friction inhomogeneities in cold rolling, 392
An experimental investigation of steel surface characteristic transfer by cold rolling, 657
The influence of the deformation mode on the final mechanical properties of products in multi-pass drawing and flat rolling, 725
Cold working
Effect of heat treatment of preform on the mechanical properties of flow formed AISI 4130 Steel Tubes—a theoretical and experimental assessment, 503
Cold-and-hot bond rolling
Analytical approach to the cold-and-hot bond rolling of sandwich sheet with outer hard and inner soft layers, 664
Collapse load
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Combination punch speed and BHF control
Development of a combination punch speed and blank-holder fuzzy control system for the deep-drawing process, 440
Compaction
Consolidation of metal powders during the extrusion process, 491
Computer simulation
Mechanical behaviour of hot and warm formed microalloyed steels, 77
Computer software
PCS_SUT: a finite element software for simulation of powder forming processes, 602
Concurrent engineering
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26
Confidence intervals
Estimation of constitutive parameters using an inverse method coupled to a 3D finite element software, 594
Constitutive equation
Hot workability and models for flow stress of NIMONIC 115 Ni-base superalloy, 242
Simulation of the fastener manufacturing process, 361
Contact model
Contact modeling in forging simulation, 583
Control of processes
Application of optimal design and control strategies to the forming of thin walled metallic components, 565
Convection
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
Cooling
Optimal cooling of rolls in hot rolling, 700
Corrugations
Friction inhomogeneities in cold rolling, 392
Coulomb friction
Study on compression forming of a rotating disk considering hybrid friction, 421
Crashworthiness
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Cross wedge rolling
Investigation of the morphology of internal defects in cross wedge rolling, 248
Optimisation of processing routes for cross rolling and spin extrusion, 856

Crushing
FE simulations of the crushing of circular tubes into triangular cross-sections, 833
Cubic function
A design of a third-order CVC roll profile, 645
Cup-and-cone fracture
Simulation of tensile test by node separation method, 608
Current waveform
Development of micro-piercing system with punch-damage monitoring function, 497
CVC
A design of a third-order CVC roll profile, 645
Cyclic torsion
The effect of cyclic torsion on the hot dynamic restoration of interstitial free steel in the austenitic range, 125

3D metrology
A combined temporal tracking and stereo-correlation technique for accurate measurement of 3D displacements: application to sheet metal forming, 736
Damage detection
Development of micro-piercing system with punch-damage monitoring function, 497
Damage mechanics
Extension of the forming limits in cold and warm forging by the FE based fracture analysis with the integrated damage model of effective stresses, 235
Verification of the damage model of effective stresses in cold and warm forging operations by experimental testing and FE simulations, 295
Deep drawing
Texture evolution during deep-drawing processes, 110
Sensitivity and stability evaluation of the deep drawing process, 302
Development of a combination punch speed and blank-holder fuzzy control system for the deep-drawing process, 440
An algorithm for determining the optimal blank shape for the deep drawing of aluminum cups, 743
Experimental and numerical study of reverse re-drawing of anisotropic sheet metals, 764
Deep drawing test
Application of wheat flour lubricants to the press-forming process, 375
Deformation
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483
Deformation characteristics
Elastic–plastic finite element analysis of cold ring rolling process, 613
Deformation coefficient
Investigation of the morphology of internal defects in cross wedge rolling, 248
Digital image correlation
A combined temporal tracking and stereo-correlation technique for accurate measurement of 3D displacements: application to sheet metal forming, 736
Dimensional tolerances
Simulation of the deformation of strip between stands during the process of rolling with a loop, 706
Dissimilar materials
Finite element modelling of the inertia friction welding process between dissimilar materials, 387
Drawing
Strain distributions in plane strain deformation through wedge-shaped dies, 317

3DS
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798
Ductile fracture
Observations on fracture in axi-symmetric and three-dimensional cold upsetting of brass, 267
Ductile fracture criteria
Simulation of tensile test by node separation method, 608
Dynamic recrystallisation
Influence of Nb, V and Ti on peak strain of deformed austenite in Mo-based micro-alloyed steels, 72
Hot workability and models for flow stress of NIMONIC 115 Ni-base superalloy, 242

Earing
An algorithm for determining the optimal blank shape for the deep drawing of aluminum cups, 743
Edge cracking
Mathematical modelling of the stress–strain state in asymmetric flattening of metal band, 689
Elastic–plastic analysis
Elastic–plastic finite element analysis of cold ring rolling process, 613
Finite element approach in the plate bending process, 778
Elastomer forming
Analysis of simultaneous sheet metal forming operations using elastomer technique, 751
Ellipsoidal surface
Analysis and finite element simulation of the tube bulge hydroforming process, 821
Elongating grooves
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731
Embossing of sheet materials
Analysis of simultaneous sheet metal forming operations using elastomer technique, 751
Endochronic theory
An endochronic plasticity model for powder compaction processes, 138
Equal channel angular extrusion
Numerical and physical modelling of plastic deformation in 2-turn equal channel angular extrusion, 309
Erichsen cupping test
Application of wheat flour lubricants to the press-forming process, 375
Experimental data
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798
Experimental mechanics
A combined temporal tracking and stereo-correlation technique for accurate measurement of 3D displacements: application to sheet metal forming, 736
Experimental methods
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Optimal cooling of rolls in hot rolling, 700
Experiments
Experimental and numerical study of reverse re-drawing of anisotropic sheet metals, 764
Explosive forming
Applications and capabilities of explosive forming, 1
Extrusion
Strain distributions in plane strain deformation through wedge-shaped dies, 317

A theoretical and experimental study of friction in metal forming by the use of the forward extrusion process, 369
Forming feature representation and process selection in cold extrusion, 456
Consolidation of metal powders during the extrusion process, 491
Computational modelling of metal extrusion and forging processes, 573

Fatigue strength
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
FE model
PCS_SUT: a finite element software for simulation of powder forming processes, 602
FE modelling
Surface defects—evolution and behaviour from cast slab to coated strip, 720
FE simulation
Cold forming of bolts without thermal treatment, 341
Die shape compensation in hot forging of titanium aerofoil sections, 347
Validation of In718 SPF and DB processes for the design of aircraft engine parts, 549
Feature recognition
Feature extraction from STEP (ISO 10303) CAD drawing files for metalforming process selection in an integrated design system, 446
FEM
Simulation of the deformation of strip between stands during the process of rolling with a loop, 706
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731
FE simulation of rectangular box forming using material characteristics from the multi-dome forming test, 772
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798
Implementation of backward tracing scheme of the FEM for design of initial tubular blank in hydroforming, 839
FEM analysis
Sensitivity and stability evaluation of the deep drawing process, 302
FEM simulation
Extension of the forming limits in cold and warm forging by the FE based fracture analysis with the integrated damage model of effective stresses, 235
Verification of the damage model of effective stresses in cold and warm forging operations by experimental testing and FE simulations, 295
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Finite element
Texture evolution during deep-drawing processes, 110
A computational approach to blanking processes, 206
Numerical simulation of lubricated contact in rolling processes, 405
The practicalities of ring rolling simulation for profiled rings, 619
An algorithm for determining the optimal blank shape for the deep drawing of aluminum cups, 743
Finite element simulation of springback in sheet metal forming, 785
3D elastic–plastic finite element simulation of cold pilgering of zircaloy tubes, 814
Finite element analysis
Parametric sensitivity analyses for FEA of hot steel forging, 353
Numerical and experimental investigation of glass–epoxy composite used in metal forming tool design, 537
A 3D finite element analysis of the hot rolling of strip with lubrication, 638
Finite element method
Observations on fracture in axi-symmetric and three-dimensional cold upsetting of brass, 267
Analytical, numerical and experimental analyses of the closed-die forging, 334
Finite element analysis and experiments of milli-part forming of strip bending using grain element, 512
Correction of hydrostatic pressure obtained by the finite element flow formulation using moving least squares method, 588
Elastic–plastic finite element analysis of cold ring rolling process, 613
Mathematical modelling of the stress–strain state in asymmetric flattening of metal band, 689
Finite element approach in the plate bending process, 778
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Finite element modelling
Numerical and physical modelling of plastic deformation in 2-turn equal channel angular extrusion, 309
Measurement of oxide properties for numerical evaluation of their failure under hot rolling conditions, 398
Application of optimal design and control strategies to the forming of thin walled metallic components, 565
Finite element simulation
Finite element modelling of the inertia friction welding process between dissimilar materials, 387
Experimental and numerical study of reverse re-drawing of anisotropic sheet metals, 764
Analysis and finite element simulation of the tube bulge hydroforming process, 821
FE simulations of the crushing of circular tubes into triangular cross-sections, 833
Influence of material and process parameters on the development of necking and bursting in flange and tube hydroforming, 849
Finite volume
Computational modelling of metal extrusion and forging processes, 573
Flange hydroforming
Influence of material and process parameters on the development of necking and bursting in flange and tube hydroforming, 849
Flatness
Friction inhomogeneities in cold rolling, 392
Determination of bending actuators set points to control crown and flatness in hot rolling of strip, 670
Flow forming
Experimental studies on bursting pressure of thin-walled flow formed pressure vessels, 228
Effect of heat treatment of preform on the mechanical properties of flow formed AISI 4130 Steel Tubes—a theoretical and experimental assessment, 503
Flow formulation
Correction of hydrostatic pressure obtained by the finite element flow formulation using moving least squares method, 588
Flow modelling
Hot workability and models for flow stress of NIMONIC 115 Ni-base superalloy, 242
Flow rule
A more general model for forming limit diagrams prediction, 213
Flow stress
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
Identification of rheological parameters on the basis of various types of plastometric tests, 150
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483

Fluidised beds
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
Forging
Die shape compensation in hot forging of titanium aerofoil sections, 347
Parametric sensitivity analyses for FEA of hot steel forging, 353
Computational modelling of metal extrusion and forging processes, 573
Forging process
On-line tool condition monitoring and control system in forging processes, 464
Forging simulation
Contact modeling in forging simulation, 583
Forming conditions
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Forming feature
Forming feature representation and process selection in cold extrusion, 456
Forming limit diagrams
A more general model for forming limit diagrams prediction, 213
The performance of Yld96 and BBC2000 yield functions in forming limit prediction, 281
Forming properties
Stabilisation of mechanical properties of the wire by roller straightening, 711
Four high mills
Determination of bending actuators set points to control crown and flatness in hot rolling of strip, 670
Four-high strip mill
Mathematical modelling of roll load and deformation in a four-high strip mill, 695
Friction
Identification of rheological parameters on the basis of various types of plastometric tests, 150
Effects of surface-topography directionality and lubrication condition on frictional behaviour during plastic deformation, 379
Friction inhomogeneities in cold rolling, 392
Friction factor
A theoretical and experimental study of friction in metal forming by the use of the forward extrusion process, 369
Friction law
Finite element modelling of the inertia friction welding process between dissimilar materials, 387
Friction test
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Friction variation
A 3D finite element analysis of the hot rolling of strip with lubrication, 638
A three-dimensional thermo-mechanical finite element model of complex strip rolling considering sticking and slipping friction, 649
Fuzzy inference
Development of a combination punch speed and blank-holder fuzzy control system for the deep-drawing process, 440

Genetic algorithms
Automatic inspection of metallic surface defects using genetic algorithms, 427
Glass–epoxy composite
Numerical and experimental investigation of glass–epoxy composite used in metal forming tool design, 537
Grain boundary element
Finite element analysis and experiments of milli-part forming of strip bending using grain element, 512
Grain colonies
Microstructural inhomogeneity and biaxial stretching limits in aluminium alloy AA6016, 258
Grain element
Finite element analysis and experiments of milli-part forming of strip bending using grain element, 512
Grain size
Microstructural inhomogeneity and biaxial stretching limits in aluminium alloy AA6016, 258
Grooved tubes
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826

Hard powder
Lining of light metals with hard powders using shot peening, 525
Hardening law
A more general model for forming limit diagrams prediction, 213
The performance of Yld96 and BBC2000 yield functions in forming limit prediction, 281
Hardness
Preparation and microstructure of in situ particle reinforced titanium matrix alloy, 103
Structure and properties of nitrogen steels under hot deformation, 188
Hardness measurement
Cold forming of bolts without thermal treatment, 341
Heat and mass transfer
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
Heat transfer
Optimal cooling of rolls in hot rolling, 700
Heat treatment
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
High strain rate
Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
High-chromium steels
Structure and properties of nitrogen steels under hot deformation, 188
High-strength steels
New materials and production technologies for innovative lightweight constructions, 532
Hollow shafts
Optimisation of processing routes for cross rolling and spin extrusion, 856
Hot deformation
Mechanical behaviour of hot and warm formed microalloyed steels, 77
Hot deformation diagram
Structure and properties of nitrogen steels under hot deformation, 188
Hot forming
Through-process modelling of microstructure evolution in hot forming of steels, 53
A dislocation density model for the simulation of hot forming processes, 130
Comparison of analytical methods and AI tools for material characterisation in hot forming, 434
Hot rolling
Modelling the temperature distribution and microstructural changes during hot rod rolling of a low carbon steel, 89
A 3D finite element analysis of the hot rolling of strip with lubrication, 638
Simulation of the deformation of strip between stands during the process of rolling with a loop, 706

Surface defects—evolution and behaviour from cast slab to coated strip, 720
Hot workability
Hot workability and models for flow stress of NIMONIC 115 Ni-base superalloy, 242
Hybrid friction
Study on compression forming of a rotating disk considering hybrid friction, 421
Hydroforming
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Implementation of backward tracing scheme of the FEM for design of initial tubular blank in hydroforming, 839
Hydrostatic pressure
Correction of hydrostatic pressure obtained by the finite element flow formulation using moving least squares method, 588
Hypoelastic model
An endochronic plasticity model for powder compaction processes, 138

IF TiNb steels
Surface defects—evolution and behaviour from cast slab to coated strip, 720
Implicit/explicit calculations
Experimental and numerical study of reverse re-drawing of anisotropic sheet metals, 764
In718 forming
Validation of In718 SPF and DB processes for the design of aircraft engine parts, 549
Industry
A National Centre for Metalforming Simulation in the UK, 555
Inertia friction welding process
Finite element modelling of the inertia friction welding process between dissimilar materials, 387
Initial buckling load
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Injection parameters
Improving mould design and injection parameters in metal injection moulding by accurate 3D finite element simulation, 518
In-plane stretching
Effect of in-plane biaxial strain paths on the variation of normal anisotropy and texture of steel sheet, 756
Integrated model
Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
Internal defects
Investigation of the morphology of internal defects in cross wedge rolling, 248
Interstitial free steel
The effect of cyclic torsion on the hot dynamic restoration of interstitial free steel in the austenitic range, 125
Inverse analysis
Identification of rheological parameters on the basis of various types of plastometric tests, 150

Kinematic hardening
Finite element simulation of springback in sheet metal forming, 785

Lagrangian method
Contact modeling in forging simulation, 583
Large deformation
Numerical simulation of lubricated contact in rolling processes, 405
Large strain
An endochronic plasticity model for powder compaction processes, 138
Laser applications
New materials and production technologies for innovative lightweight constructions, 532
Light metal
Lining of light metals with hard powders using shot peening, 525
Lightweight construction
New materials and production technologies for innovative lightweight constructions, 532
Limit strains
Microstructural inhomogeneity and biaxial stretching limits in aluminium alloy AA6016, 258
Limiting frictional coefficient
Study on compression forming of a rotating disk considering hybrid friction, 421
Lining
Lining of light metals with hard powders using shot peening, 525
Local heat treatment
New materials and production technologies for innovative lightweight constructions, 532
Localisation
The self-excited waves of deformation localisation and limiting state criterion for Zr–Nb alloys, 287
Looping
Simulation of the deformation of strip between stands during the process of rolling with a loop, 706
Low carbon steel
Modelling the temperature distribution and microstructural changes during hot rod rolling of a low carbon steel, 89
Lubricant
Application of wheat flour lubricants to the press-forming process, 375
Lubrication
Identification of rheological parameters on the basis of various types of plastometric tests, 150
Numerical simulation of lubricated contact in rolling processes, 405
A 3D finite element analysis of the hot rolling of strip with lubrication, 638

Machine vision
Automatic inspection of metallic surface defects using genetic algorithms, 427
Material behaviour
Microforming—from basic research to its realization, 35
Material characterisation
Comparison of analytical methods and AI tools for material characterisation in hot forming, 434
Material failure
A computational approach to blanking processes, 206
Materials modelling
Universal multi-objective function for optimising superplastic-damage constitutive equations, 199
Mathematical modelling
Modelling the temperature distribution and microstructural changes during hot rod rolling of a low carbon steel, 89
Matrix mathematical model
Mathematical modelling of roll load and deformation in a four-high strip mill, 695
Mean flow stress
Feasibility study of partial recrystallisation in multi-pass hot deformation process and application to calculation of mean flow stress, 63
Measurement
Measurement of oxide properties for numerical evaluation of their failure under hot rolling conditions, 398
Mechanical damping
Experimental investigation on the viscoelastic properties of porous metals, 144

Mechanical properties
Mechanical behaviour of hot and warm formed microalloyed steels, 77
Mechanical properties of tension levelled and skin passed steels, 155
The evaluation of redundant deformation factors in axi-symmetric bar drawing of austenitic stainless steel, 323
Mechanical tests
Estimation of constitutive parameters using an inverse method coupled to a 3D finite element software, 594
Metal forming
A theoretical and experimental study of friction in metal forming by the use of the forward extrusion process, 369
Finite element approach in the plate bending process, 778
Optimisation of processing routes for cross rolling and spin extrusion, 856
Metal forming tool
Numerical and experimental investigation of glass–epoxy composite used in metal forming tool design, 537
Metal injection moulding
Improving mould design and injection parameters in metal injection moulding by accurate 3D finite element simulation, 518
Metal powders
Consolidation of metal powders during the extrusion process, 491
Metalforming
Feature extraction from STEP (ISO 10303) CAD drawing files for metalforming process selection in an integrated design system, 446
Metallurgy
Applications and capabilities of explosive forming, 1
Microalloyed steel
Mechanical behaviour of hot and warm formed microalloyed steels, 77
Micro-damage
Universal multi-objective function for optimising superplastic-damage constitutive equations, 199
Micro-metal forming
Microforming—from basic research to its realization, 35
Microstructure
Preparation and microstructure of in situ particle reinforced titanium matrix alloy, 103
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
A dislocation density model for the simulation of hot forming processes, 130
Simulation of substructural strengthening in hot flat rolling, 179
Experimental studies on bursting pressure of thin-walled flow formed pressure vessels, 228
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483
Microstructure evolution
Through-process modelling of microstructure evolution in hot forming of steels, 53
Mechanical behaviour of hot and warm formed microalloyed steels, 77
Milli-structure
Finite element analysis and experiments of milli-part forming of strip bending using grain element, 512
Model integration
On-line tool condition monitoring and control system in forging processes, 464
Model tests
Analytical, numerical and experimental analyses of the closed-die forging, 334
Modelling
Feasibility study of partial recrystallisation in multi-pass hot deformation process and application to calculation of mean flow stress, 63
A dislocation density model for the simulation of hot forming processes, 130
A three-dimensional thermo-mechanical finite element model of complex strip rolling considering sticking and slipping friction, 649
Modification
A study of the manufacturing of tie-rod ends with casting/forging process, 471
Morphology
Automatic inspection of metallic surface defects using genetic algorithms, 427
Mould design
Improving mould design and injection parameters in metal injection moulding by accurate 3D finite element simulation, 518
Moving least squares method
Correction of hydrostatic pressure obtained by the finite element flow formulation using moving least squares method, 588
Multi-dome test
FE simulation of rectangular box forming using material characteristics from the multi-dome forming test, 772
Multi-pass drawing
The influence of the deformation mode on the final mechanical properties of products in multi-pass drawing and flat rolling, 725
Multistage forming
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Mushy state forming
Application of resistance heating technique to mushy state forming of aluminium alloy, 477

Necking
The effect of temperature on strain-rate sensitivity in high strength Al–Mg alloy sheet, 193
Influence of material and process parameters on the development of necking and bursting in flange and tube hydroforming, 849
Nickel-base superalloy
A dislocation density model for the simulation of hot forming processes, 130
Hot workability and models for flow stress of NIMONIC 115 Ni-base superalloy, 242
Nitrogen
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Nonlinear finite element analysis
Determination of buckling limit of strain in cold roll forming by the finite element analysis, 626
Normal anisotropy
Effect of in-plane biaxial strain paths on the variation of normal anisotropy and texture of steel sheet, 756
Numerical analysis
Simulation of tensile test by node separation method, 608
Numerical analysis of cold roll forming of symmetrical open sections, 633
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731
Numerical simulation
Feasibility study of partial recrystallisation in multi-pass hot deformation process and application to calculation of mean flow stress, 63
A computational approach to blanking processes, 206
A more general model for forming limit diagrams prediction, 213
The performance of Yld96 and BBC2000 yield functions in forming limit prediction, 281
Simulation of the fastener manufacturing process, 361
Improving mould design and injection parameters in metal injection moulding by accurate 3D finite element simulation, 518

Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798

On-line monitoring and control
On-line tool condition monitoring and control system in forging processes, 464
Open sections
Numerical analysis of cold roll forming of symmetrical open sections, 633
Optimisation
Universal multi-objective function for optimising superplastic-damage constitutive equations, 199
Sensitivity and stability evaluation of the deep drawing process, 302
Application of optimal design and control strategies to the forming of thin walled metallic components, 565
A design of a third-order CVC roll profile, 645
An algorithm for determining the optimal blank shape for the deep drawing of aluminum cups, 743
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Oxide defects
Surface defects—evolution and behaviour from cast slab to coated strip, 720
Oxide scale failure
Measurement of oxide properties for numerical evaluation of their failure under hot rolling conditions, 398

Parameter estimation
Estimation of constitutive parameters using an inverse method coupled to a 3D finite element software, 594
Parametric sensitivity analysis
Parametric sensitivity analyses for FEA of hot steel forging, 353
Partial recrystallisation
Feasibility study of partial recrystallisation in multi-pass hot deformation process and application to calculation of mean flow stress, 63
Passive ultrasonic testing
Verification of the damage model of effective stresses in cold and warm forging operations by experimental testing and FE simulations, 295
Peak strain
Influence of Nb, V and Ti on peak strain of deformed austenite in Mo-based micro-alloyed steels, 72
Peak stress
Influence of Nb, V and Ti on peak strain of deformed austenite in Mo-based micro-alloyed steels, 72
Phase transformation
Modelling the temperature distribution and microstructural changes during hot rod rolling of a low carbon steel, 89
Physical modelling
Numerical and physical modelling of plastic deformation in 2-turn equal channel angular extrusion, 309
Physical prototyping and manufacturing
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26
Piercing
Analysis of simultaneous sheet metal forming operations using elastomer technique, 751
Piezoelectric element
Development of micro-piercing system with punch-damage monitoring function, 497
Pipe
Determination of buckling limit of strain in cold roll forming by the finite element analysis, 626
Plane strain
Strain distributions in plane strain deformation through wedge-shaped dies, 317
Plastic deformation
An endochronic plasticity model for powder compaction processes, 138
Plasticity
Mechanical properties of tension levelled and skin passed steels, 155
The self-excited waves of deformation localisation and limiting state criterion for Zr–Nb alloys, 287
Effects of surface-topography directionality and lubrication condition on frictional behaviour during plastic deformation, 379
Plate bending
Finite element approach in the plate bending process, 778
Porosity
Experimental investigation on the viscoelastic properties of porous metals, 144
Post-processing
PCS_SUT: a finite element software for simulation of powder forming processes, 602
Powder compaction
PCS_SUT: a finite element software for simulation of powder forming processes, 602
Powder forming
An endochronic plasticity model for powder compaction processes, 138
Preform
Effect of heat treatment of preform on the mechanical properties of flow formed AISI 4130 Steel Tubes—a theoretical and experimental assessment, 503
Preform design
Implementation of backward tracing scheme of the FEM for design of initial tubular blank in hydroforming, 839
Pre-processing
PCS_SUT: a finite element software for simulation of powder forming processes, 602
Pressure vessel
Experimental studies on bursting pressure of thin-walled flow formed pressure vessels, 228
Effect of heat treatment of preform on the mechanical properties of flow formed AISI 4130 Steel Tubes—a theoretical and experimental assessment, 503
Principle of measurement
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Process selection
Forming feature representation and process selection in cold extrusion, 456
Processes
Microforming—from basic research to its realization, 35
Processing map
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483
PSD
An experimental investigation of steel surface characteristic transfer by cold rolling, 657

Radiation
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
Rapid prototyping and manufacturing
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26

Recrystallisation
A dislocation density model for the simulation of hot forming processes, 130
Recrystallised fraction
Feasibility study of partial recrystallisation in multi-pass hot deformation process and application to calculation of mean flow stress, 63
Rectangular box forming
FE simulation of rectangular box forming using material characteristics from the multi-dome forming test, 772
Redundant deformation
The evaluation of redundant deformation factors in axi-symmetric bar drawing of austenitic stainless steel, 323
Refinement
A study of the manufacturing of tie-rod ends with casting/forging process, 471
Resistance heating
Application of resistance heating technique to mushy state forming of aluminium alloy, 477
Rib height
A three-dimensional thermo-mechanical finite element model of complex strip rolling considering sticking and slipping friction, 649
Ribbed strip
A three-dimensional thermo-mechanical finite element model of complex strip rolling considering sticking and slipping friction, 649
Rigid–plastic finite-element method
Simulation of tensile test by node separation method, 608
Ring rolling
The practicalities of ring rolling simulation for profiled rings, 619
Rod (or bar) rolling
Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
Roll load
Mathematical modelling of roll load and deformation in a four-high strip mill, 695
Rolling
Simulation of substructural strengthening in hot flat rolling, 179
Numerical simulation of lubricated contact in rolling processes, 405
Optimal cooling of rolls in hot rolling, 700
Roughness
An experimental investigation of steel surface characteristic transfer by cold rolling, 657
Rubber forming
Analysis of simultaneous sheet metal forming operations using elastomer technique, 751

Self-annealing effect
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
Semi-analytical derivatives
Estimation of constitutive parameters using an inverse method coupled to a 3D finite element software, 594
Semi-solid processing
Application of resistance heating technique to mushy state forming of aluminium alloy, 477
Sensitivity
Sensitivity and stability evaluation of the deep drawing process, 302
Application of optimal design and control strategies to the forming of thin walled metallic components, 565
Sheet forming
Microstructural inhomogeneity and biaxial stretching limits in aluminium alloy AA6016, 258
A National Centre for Metalforming Simulation in the UK, 555
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Sheet metal
Effect of in-plane biaxial strain paths on the variation of normal anisotropy and texture of steel sheet, 756
Experimental and numerical study of reverse re-drawing of anisotropic sheet metals, 764
Sheet metal forming
Modelling the constitutive behaviour of thin metal sheet using strain gradient theory, 164
Development of a combination punch speed and blank-holder fuzzy control system for the deep-drawing process, 440
Determination of buckling limit of strain in cold roll forming by the finite element analysis, 626
Finite element simulation of springback in sheet metal forming, 785
Towards standard benchmarks and reference data for validation and improvement of numerical simulation in sheet metal forming, 798
Zinc-alloys as tool materials in short-run sheet-metal forming processes. Experimental analysis of three different zinc-alloys, 806
Shot peening
Lining of light metals with hard powders using shot peening, 525
Simulation
A dislocation density model for the simulation of hot forming processes, 130
Numerical simulation of heat and mass transfer in fluidised bed heat treatment furnaces, 170
Simulation of substructural strengthening in hot flat rolling, 179
A National Centre for Metalforming Simulation in the UK, 555
Simulation of the deformation of strip between stands during the process of rolling with a loop, 706
Stabilisation of mechanical properties of the wire by roller straightening, 711
Finite element approach in the plate bending process, 778
Simulation of metal forming
Numerical and physical modelling of plastic deformation in 2-turn equal channel angular extrusion, 309
Size effects
Modelling the constitutive behaviour of thin metal sheet using strain gradient theory, 164
Slab method
Analytical, numerical and experimental analyses of the closed-die forging, 334
Slip line field
Strain distributions in plane strain deformation through wedge-shaped dies, 317
Slit beam model
Determination of bending actuators set points to control crown and flatness in hot rolling of strip, 670
Sliver
Surface defects—evolution and behaviour from cast slab to coated strip, 720
Slow strain rate testing (SSRT)
Stress corrosion cracking susceptibility of Al–Mg alloy sheet with high Mg content, 275
Small hole piercing
Development of micro-piercing system with punch-damage monitoring function, 497
Speckle-interferometry
The self-excited waves of deformation localisation and limiting state criterion for Zr–Nb alloys, 287
Spin extrusion
Optimisation of processing routes for cross rolling and spin extrusion, 856
Springback
Finite element approach in the plate bending process, 778

Finite element simulation of springback in sheet metal forming, 785
Springs manufacturing
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
Stability
Sensitivity and stability evaluation of the deep drawing process, 302
Stainless steels
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Starch particle
Application of wheat flour lubricants to the press-forming process, 375
Steel
Surface defects—evolution and behaviour from cast slab to coated strip, 720
STEP
Feature extraction from STEP (ISO 10303) CAD drawing files for metalforming process selection in an integrated design system, 446
Stereovision
A combined temporal tracking and stereo-correlation technique for accurate measurement of 3D displacements: application to sheet metal forming, 736
Sticking friction
Analysis and finite element simulation of the tube bulge hydroforming process, 821
Storage modulus
Experimental investigation on the viscoelastic properties of porous metals, 144
Straightening
Stabilisation of mechanical properties of the wire by roller straightening, 711
Strain
Structure and properties of nitrogen steels under hot deformation, 188
Strain distribution
Strain distributions in plane strain deformation through wedge-shaped dies, 317
Strain gradient plasticity
Modelling the constitutive behaviour of thin metal sheet using strain gradient theory, 164
Strain hardening
Effect of heat treatment of preform on the mechanical properties of flow formed AISI 4130 Steel Tubes—a theoretical and experimental assessment, 503
Strain path
The effect of cyclic torsion on the hot dynamic restoration of interstitial free steel in the austenitic range, 125
A more general model for forming limit diagrams prediction, 213
Effect of in-plane biaxial strain paths on the variation of normal anisotropy and texture of steel sheet, 756
Strain rate
The deformation processing map for control of microstructure in CuAl9.2Fe3 aluminium bronze, 119
The effect of temperature on strain-rate sensitivity in high strength Al–Mg alloy sheet, 193
Bearing materials obtained by recycling of aluminium and aluminium bronze chips, 483
Strain rate-dependent material
Development of a combination punch speed and blank-holder fuzzy control system for the deep-drawing process, 440
Strain-rate sensitivity
The effect of temperature on strain-rate sensitivity in high strength Al–Mg alloy sheet, 193
Stress
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731
Stress corrosion cracking (SCC)
Stress corrosion cracking susceptibility of Al–Mg alloy sheet with high Mg content, 275
Stress–strain condition
Numerical and experimental investigation of glass–epoxy composite used in metal forming tool design, 537
Strip bending
Finite element analysis and experiments of milli-part forming of strip bending using grain element, 512
Strip crown
Determination of bending actuators set points to control crown and flatness in hot rolling of strip, 670
Strip products
Surface defects—evolution and behaviour from cast slab to coated strip, 720
Strip rolling
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Friction inhomogeneities in cold rolling, 392
Structure transformation
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Superplastic characteristics
FE simulation of rectangular box forming using material characteristics from the multi-dome forming test, 772
Superplastic forming
Validation of In718 SPF and DB processes for the design of aircraft engine parts, 549
Superplasticity
Universal multi-objective function for optimising superplastic-damage constitutive equations, 199
FE simulation of rectangular box forming using material characteristics from the multi-dome forming test, 772
Surface directionality
Effects of surface-topography directionality and lubrication condition on frictional behaviour during plastic deformation, 379
Surface finish
The effect of vibration on surface finish for semisolid and cast components, 543
Surface influence coefficient
Determination of bending actuators set points to control crown and flatness in hot rolling of strip, 670
Surface transfer
An experimental investigation of steel surface characteristic transfer by cold rolling, 657
Surface-topography
Effects of surface-topography directionality and lubrication condition on frictional behaviour during plastic deformation, 379
Symmetrical section
Numerical analysis of cold roll forming of symmetrical open sections, 633

Tailored blanks
New materials and production technologies for innovative lightweight constructions, 532
Tangent delta
Experimental investigation on the viscoelastic properties of porous metals, 144
Technology integration
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26
Temperature
The effect of temperature on strain-rate sensitivity in high strength Al–Mg alloy sheet, 193
Theoretical and experimental analysis of stress and temperature distributions during the process of rolling bimetallic rods, 731

Tensile test
Simulation of tensile test by node separation method, 608
Tensile testing
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Cold forming of bolts without thermal treatment, 341
Texture evolution
Texture evolution during deep-drawing processes, 110
Textures
Effect of in-plane biaxial strain paths on the variation of normal anisotropy and texture of steel sheet, 756
Thermo-mechanical controlled process
Integrated model for thermo-mechanical controlled process in rod (or bar) rolling, 678
Thermo-mechanical finite element model
A three-dimensional thermo-mechanical finite element model of complex strip rolling considering sticking and slipping friction, 649
Thermomechanical treatment
Peculiarities of deformation and structure formation in nitrogen-containing steels of various structural kinds, 97
Thickness ratio of sandwich sheet
Analytical approach to the cold-and-hot bond rolling of sandwich sheet with outer hard and inner soft layers, 664
Thin-walled structures
Elastic–plastic theory for initial buckling load of thin-walled grooved tubes under axial compression, 826
Through-process modelling
Through-process modelling of microstructure evolution in hot forming of steels, 53
Tie-rod end
A study of the manufacturing of tie-rod ends with casting/forging process, 471
Titanium matrix composites
Preparation and microstructure of in situ particle reinforced titanium matrix alloy, 103
Tool material
Zinc-alloys as tool materials in short-run sheet-metal forming processes. Experimental analysis of three different zinc-alloys, 806
Tribology
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Tube bulge hydroforming
Analysis and finite element simulation of the tube bulge hydroforming process, 821
Tube forming
On possibilities for the determination of the coefficient of friction in hydroforming of tubes, 412
Tube hydroforming
Application of optimal design and control strategies to the forming of thin walled metallic components, 565
FE simulations of the crushing of circular tubes into triangular cross-sections, 833
Influence of material and process parameters on the development of necking and bursting in flange and tube hydroforming, 849

Vibration
The effect of vibration on surface finish for semisolid and cast components, 543
Virtual prototyping and manufacturing
Integration of CAD/CAM/CAE/RP for the development of metal forming process, 26
Viscoelasticity
Experimental investigation on the viscoelastic properties of porous metals, 144
Void growth
Universal multi-objective function for optimising superplastic-damage constitutive equations, 199

Wall thickness distribution
Optimisation of the distribution of wall thickness in the multistage sheet metal forming of wheel disks, 792
Warm forging
Extension of the forming limits in cold and warm forging by the FE based fracture analysis with the integrated damage model of effective stresses, 235
Verification of the damage model of effective stresses in cold and warm forging operations by experimental testing and FE simulations, 295
Warm forming
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
Wear resistance
Zinc-alloys as tool materials in short-run sheet-metal forming processes. Experimental analysis of three different zinc-alloys, 806
Wheat flour
Application of wheat flour lubricants to the press-forming process, 375
Wire drawing
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Warm forming of acid resistant steel wires used for manufacturing of springs, 326
Simulation of the fastener manufacturing process, 361
Wire flattening
Application of self-annealing effect to the manufacturing of strips and wires showing high fatigue strength, 219
Work hardening
Mechanical properties of tension levelled and skin passed steels, 155
Wrought zirconium alloy
The self-excited waves of deformation localisation and limiting state criterion for Zr–Nb alloys, 287

Yield function
A more general model for forming limit diagrams prediction, 213
The performance of Yld96 and BBC2000 yield functions in forming limit prediction, 281
Yield locus
Texture evolution during deep-drawing processes, 110
Yield strength
Mechanical properties of tension levelled and skin passed steels, 155
Yld96
Modelling of plastic anisotropy in heat-treated aluminium extrusions, 84

Zinc-alloys
Zinc-alloys as tool materials in short-run sheet-metal forming processes. Experimental analysis of three different zinc-alloys, 806
Zircaloy tubes
3D elastic–plastic finite element simulation of cold pilgering of zircaloy tubes, 814
